Five Ways to Save \$2,500 in 20 Minutes

by *David Bach*

Posted on Friday, January 12, 2007, 12:00AM

If you feel like you're starting late on your savings plan, you're not alone. According to a nationwide survey I commissioned while writing my book "Start Late, Finish Rich," half of all Americans feel that they're "starting late."

Half of those surveyed had less than \$10,000 in total savings, while 3 out of 10 had less than \$1,000 in savings. No wonder so many Americans are worried about their financial futures.

Give Yourself a Break

While some may blame themselves for not having started earlier, the reality is that many people start late not because of shortsightedness or laziness or irresponsibility, but because life threw them a curveball.

I hear from people all the time who start saving late because of divorce, death, illness, disability, and so on. But what's done is done. You can't go back and fix the past -- it's time to move forward. (To read more about making a fresh start this year, see my column from earlier this month, "[Five Principles for Happiness in 2007](#).")

Turbo-Charge Your Latte Factor

What's the fastest way to get back on track with your [financial plan](#) for the future? You've got to find your money and keep track of the small daily expenditures that tend to add up over time.

If you're a regular reader of this column or have read any of my books, you already know about this phenomenon, which I call [the Latte Factor](#). If you're starting late, though, tracking these expenses won't be enough.

Instead, you've got to turbo-charge your Latte Factor by cutting back on all fixed expenses -- those monthly or yearly recurring costs that are also known as your overhead. You don't have to give things up; again, just cut them back. Call it the Double-Latte Factor.

Finding your Double-Latte Factor is fairly simple, since you most likely get a bill for your fixed expenses (like rent or [mortgage](#), car payments, Internet service, phone, cable, etc). You should also check your bank and credit card statement for any subscription-type services that are automatically debited to your account or charged to your card.

Take a close look to determine who's attached themselves to your monthly income. You may be shocked to realize how many people are on your household "payroll."

The 20-Minute Solution

WE
RATH
YOUR
CAR

PROGR
DI

Most people overestimate what they can do financially in a year -- and underestimate what they can achieve financially in just a decade or two.

For now, aim to find \$2,500 to cut out of your spending this year and invest it in a savings or retirement plan instead. To see the potential results, do the math with my [Latte Factor calculator](#).

In 20 years, investing \$2,500 a year with an 8 percent [interest rate](#) will amount to almost \$125,000. In 30 years, you'll have accumulated over [\\$300,000](#), and in 40 years, almost \$700,000. Earn a higher interest rate -- say 10 percent -- and in 40 years you would have well over a million dollars.

Are you ready to transform your finances this year? Here are five ways to save over \$2,500 in just 20 minutes:

1. Lose the premium cable television package and save \$960.

The average premium package -- over 200 channels -- can easily cost \$100 a month when you include the cable box fees and all the crazy taxes and unexplainable expenses that are legally tacked onto the fixed cost. That's \$1,200 a year just to watch TV!

And, of those 200 channels, you probably only watch maybe a dozen. Do you really need all the extra channels? And do you really need a cable box for every TV set in the house? If you downgrade to a more basic cable package (many of which start at \$19.99 a month) and return a cable box or two you'll save about \$80 per month, or a whopping \$960 for the year.

2. Get real about your cell phone and save \$240.

According to a recent study by Yankee Group, on average cell phone users pay for 791 minutes per month and use only 477. Right now, an individual plan with 900 minutes through Verizon Wireless costs \$60 a month -- add in taxes and fees and you're looking at an \$80 monthly bill. That's close to \$1,000 a year in cell phone charges.

If you go with a plan that offers fewer minutes -- 450 -- it will only cost you \$40 a month, or \$60 with taxes and fees. Simply by opting for a lower plan, you'll easily save \$20 a month, or \$240 a year. And that's being conservative; chances are your cell phone bill is even higher than my estimate here, considering all the available bells and whistles.

3. Go wireless and save \$600.

It's becoming increasingly common to cancel landline phone service altogether and use a cell phone in place of a home phone. Your landline is probably costing you at least \$50 a month, so ditching it would mean a savings of \$600 a year.

If you get great reception at home, are organized enough not to lose your phone, and are good about keeping it charged, this might be a great solution for you.

4. Exercise smart and save \$240.

We all know the trap: You pay your monthly or yearly gym membership dues and don't go quite as often as you thought you would.

You could cancel your membership and save a bundle, but you don't have to give it up completely. Many Platinum Memberships offer certain extras, including the option to work out in other locations -- maybe while traveling or on vacation. If you downgrade to a more basic membership you can save at least \$20 a month, or \$240 a year at the very least.

5. Shop for [car insurance](#) and save \$500.

This one's a no-brainer. If you own or lease a car, car insurance is a must-have. But don't settle for the first rate quote you get -- you've got to shop around. Simply by picking up the phone and getting some comparative quotes, you could wind up saving 10 to 15 percent on what you're paying today, and possibly more.

I wrote [a column on this topic](#) last year. My assistant saved \$800 with one 10-minute phone call. Even with a more conservative savings estimate of, say, \$500 a year, it's still a windfall.

Your grand total savings: \$ 2,540.

A Little Pain, a Lot of Gain

Pretty simple, right? Well, maybe not. The truth is that it'll take some effort on your part. The key is to remember that you only need to cut back on certain items, not give them up entirely.

I challenge you to find your Double-Latte Factor. Explore how much you're paying for your bottled-water delivery, [homeowner's insurance](#), high-speed internet connection, car lease, DVD subscriptions -- I could go on and on. The extra money is there. You just need to find it.

Overall:

I feel that I may have started late, but not too late to start saving. I am learning all I can for my children so that they will start early on saving for their futures. Thanks a million.

Overall:

excellent. i hope all the youngsters are able to see the wisdom of this

Yahoo! Finance User - Friday, March 30, 2007, 12:26PM ET

Overall:

I have cut back on many things, and I save a lot of money, BUT where am I supposed to invest (safely) to get an awesome interest rate like 8-10%??? I only have a savings account with about 1%, and some CD's with about 4%. If anyone has any suggestions just comment after this.

Yahoo! Finance User - Friday, March 30, 2007, 9:34AM ET

Overall:

We have never had cable, we now just have cell phones, we don't belong to a gym and we shop for car and homeowners insurance every few years. Our biggest \$ problem is my husband likes to spend. He eats out for lunch all the time. We could save at least \$120/month. Also like to eat out for dinner. Even if I have food cooking. \$200/month. If we could cut back we could save alot. One way that we stated saving money and I know that this will not work for everyone...we invested in a corn burning stove. We live on 5 acres. We plant our own corn enough to last 2 years of heating and then we heat our home for a lot less then the cost of propane. It has also decreased our electric bill.

Overall:

Great stuff! Another way to save at least \$2,500 per year is in Groceries/Restaurants!!! This spending category is out of control for most people. I got my spending under control by spending all of my money on paper PRIOR to the month's start. That way, I had a plan BEFORE I had the money. There are free spending tools available at www.josephsangl.com that really helped me.
